Visonic Technologies
Enterprise Protection Solutions

An integrated control and alert system that allows you to back up your staff with more than just words

Emergency Signaling and Control Systems for Correctional Facilities

- ◇ **Scalable solutions** empower you to start with the system you require and expand as the need arises

- ◇ **Open architecture** allows integration of third party applications

- ◇ **Client server architecture** provides visibility of operations throughout the facility - at minimum extra cost

- ◇ **Cost-saving over time** - reduced insurance premiums, decreased equipment theft and loss

- ◇ **Fully accountable system**

- ◇ **Dual-technology staff alert transmitter, provides exact location and identification**

- ◇ **Man-down alert**

- ◇ **Network-capable - sends event alerts to multiple computers**

- ◇ **Tracks key assets**

Comprehensive system provides accurate event information

Outfitted with dual-technology transmitters, staff members can call for assistance wherever they are in your facility. Tags specifically designed for correctional officers provide assistance when officers cannot independently call for help: the transmitter will automatically send an alert when it is at a tilt of more than 60 degrees. Visonic Technologies (VT) revolutionary technology provides accurate locating, even within a set of rooms, while also enabling signaling through walls. Integrating with CCTV allows you to track movement of a staff member under duress and maintain a record of the event.
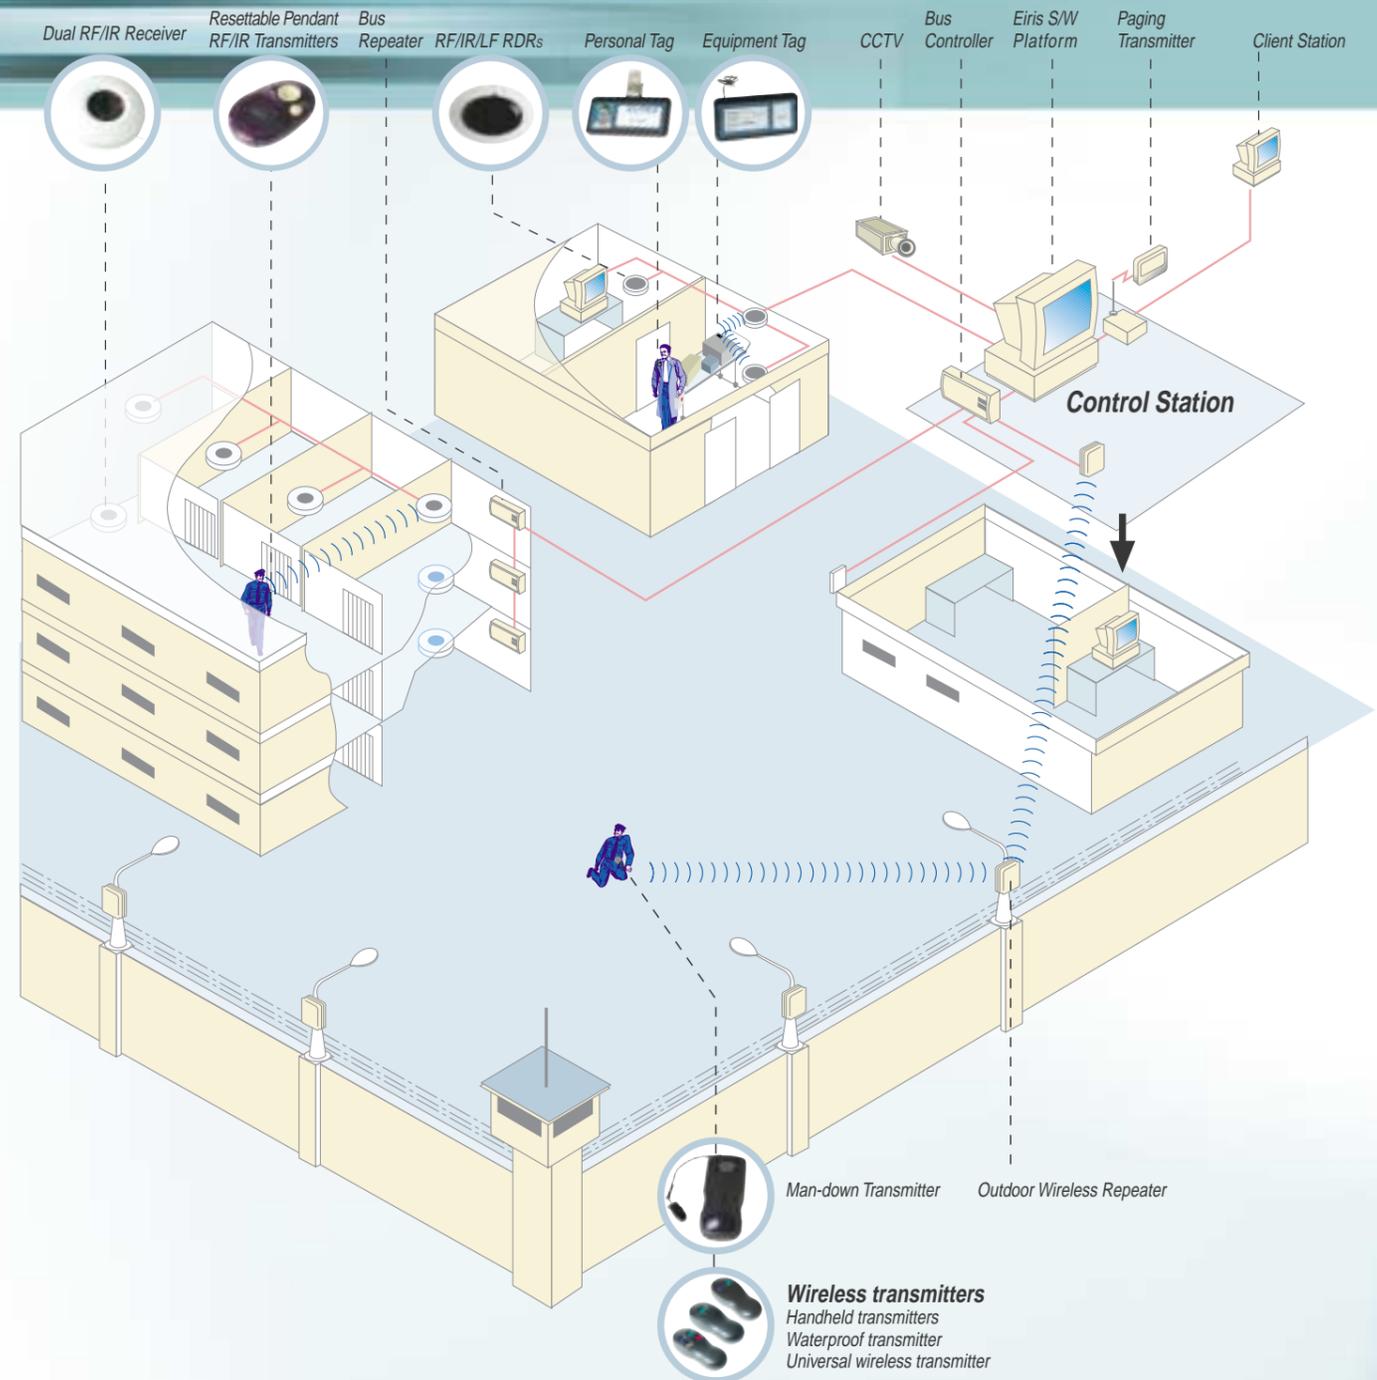

System integrity is everything

Designed for 100% accountability, our system is built with internal checks, so it works properly at all times. Service alerts (such as low battery) are sent directly and specifically to the responsible employee. The hardware infrastructure is fully supervised, with checks performed periodically.

Modular and simple to use

The system is completely modular, allowing for easy plug-in and out of parts. End users can easily manage and maintain their own system reducing the need for service calls. The solution is completely scalable, allowing you to choose the elements that fit your needs today, while maintaining the flexibility to add additional features in the future.

Keep track of your equipment

Our system allows you to monitor and control many of your building functions and automatically watch over various items such as sump pumps, freezers, refrigeration units and more while receiving reports of any malfunction. Intelligently integrating with third-party equipment such as CCTV and access control, the system allows for recording and database storing of events for future use. Similarly, the system can tracks assets such as medical equipment or other portable items to ensure they remain on site.

State-of-the-Art Patented Technology

◇ Round-the-clock support for each and every staff member, allowing for immediate response, wherever they are in the facility

◇ Manual and automatic emergency signaling – responding staff can be notified even when C/O can't activate a call for help

◇ Powered by Eiris™ - a full server-client based software provides simple interface to monitor a number of facility systems and enables specific alert signals to be displayed where needed (i.e.: staff emergency alerts to control, system management alerts to system administrator)

◇ Easy integration of third-party devices like fence alarm/control and CCTV

◇ Full accountability - all receivers, repeaters, input/output modules, power supplies and infrastructure checked periodically for malfunction

◇ Critical equipment monitoring - track institution assets

◇ Coverage of both outdoor and indoor areas of your facility
