## Correctional Facility Emergency Call Solution

### Because the Safety of Personnel is Essential

The Elpas Emergency Call Solution, using RTLS technology, safeguards correctional security personnel most at risk from inmate violence and aggression. Elpas Emergency Call provides manual and/or automated alerts that deliver precise real-time location data which identifies the individual in trouble and the location of the evolving security incident in order to dispatch emergency response teams.

**How Emergency Call Works:** Security personnel that may be subject to attack or injury in high-risk detention centers are provided with an Elpas Man-Down Emergency Call Transmitter. Security personnel can use the transmitter's two emergency call buttons located on either side of the unit for manual wireless duress alerting. An onboard tilt switch and a pull cord enable automatic alarming when the protected staff member is knocked down or if the unit is grabbed by force.

The Man-Down Emergency Call Transmitter is an integral part of Elpas Emergency Call Solution for Correctional Facilities linking personnel to precise real-time indoor location for end-to-end incident management.

## Emergency Call Solution Features

### Precise Real-Time Location Visibility

Delivers staff identification & sub-room location data of the evolving security incident

### Incident Management

Includes real-time interactive screens for managing the life cycle of the received duress call

### Robust Alert Notification Options

Paging services, display panels, SMS messages, emails, automated PA announcements and warning messages on computer screens concurrently supporting multiple first responder scenarios

### Incident Reporting

Provides post emergency situation reports for event review and response evaluation

### Advanced Supervision

Emergency call transmitters and infrastructure supervision includes automatic system alert notifications, audit trails and system logs

### Solution Scalability

From cell-block stand-alone installations, to facility-wide networked staff protection solutions

### Highly Scalable Transmitter Capacity

Additional staff members can be added at any time without risk to individual personnel safety

### High Availability

Distributed local control ensures that staff remain protected even when network segments or the RTLS server are offline

### Backend Integration

Supports easy integration with other security systems including CCTV to provide both real time and post incident analysis

### International Standards

CE, FCC and IC compliant

*Elpas offers a wide range of wireless RTLS Transmitters and Tags which are designed to suit the work requirements of any correctional facility. From man-down transmitters for guards, to clip on badges for general operations personnel Elpas has the right emergency call transmitter, because the safety of personnel is essential.*

### Related Elpas RTLS Applications:
