

For Immediate Release – Product Announcement

Visonic Technologies announces the immediate availability of its Elpas Door Kit. An ‘All-in-One Starter Kit’, packaged with everything required to install a single-door Wander Solution, which protects senior residents or ambulatory patients while allowing their mobile independence.

October 18th, 2010 – Visonic Technologies (VT), a growing world leader in Active RFID/RTLS safety and security solutions, today announced the immediate availability of its Elpas Door Kit Wandering Patient Starter Solution. The kit is the newest addition to the company’s expanding line of hospital-grade real-time patient safety and security monitoring solutions.

The Elpas Door Kit supplies low-cost versatile protection of ambulatory individuals suffering from Alzheimer’s disease and dementia or other high risk residents and patients who exhibit the tendency to wander off unnoticed. The solution permits regular movement of care givers, guests, other residents or family members through a protected doorway while preventing un-supervised ‘Wanderers’ from leaving the protected area. Should these high risk residents or patients approach the door through which they are not allowed to pass unescorted, the solution’s automatic alert functionality immediately triggers.

The Elpas Door Kit highlights VT’s technological commitment to deliver wandering patient protection for smaller healthcare facilities. An innovative safety and security engineered solution which is easy-to-install with minimal facility impact, eliminates the need for a costly dedicated computer server, does not require field programming and is simple to use by all staff members.

“The Elpas Door Kit is a complete ‘Starter Solution’ packaged with everything needed to install a single-door, wandering patient solution by an electrician or security/alarm technician” said Michael Wasserstein, CEO of Visonic Technologies. “And since every healthcare facility is different, the Elpas Door Kit can easily adapt to the ‘Best Practices’ of any healthcare facility.”

The Elpas Door Kit is factory pre-configured to support flexible patient escort alternatives, handle as many patients, residents or escorts as required and supports intelligent alert options. This out-of-the-box solution is easy expandable to cover additional doors, an entire floor, a whole building or a complete campus to protect patients, staff members and manage medical assets without degradation to the core wandering patient functionality.

The Elpas Door Kit is internationally safety compliant and is CE, FCC and IC approved.

About Visonic Technologies

Visonic Technologies is a fully owned subsidiary of the Visonic Group (TASE: VSE). The company is a dynamic and growing global leader in Active RFID/RTLS safety and security products and solutions. VT delivers out-of-the-box as well as custom tailored risk mitigation tools that protect high-value assets, staff members, patients and visitors in hospitals, assisted living facilities, museums, high-security prisons and intelligent buildings. The company currently serves customers through a network of OEMs, integrators and resellers throughout the Americas, EMEA and APAC.
