

Staff Attack Transmitter

Description

The SpiderAlert Staff Attack Transmitter is a mobile emergency call radio transmitter. The device is designed to protect staff members in such high-risk environments as correctional facilities, secure psychiatric units, acute care hospitals as well as custodial care homes from patient/inmate violence.

The staff attack transmitter features an emergency panic button for personnel safety, which provides user reassurance that immediate help is always nearby. Pressing the panic button triggers the transmitter to emit UHF and supplemental IR message code transmissions that can be used to determine the exact location of the emergency to Room Level with Sub-Room Level Precision as well as to identify the specific individual under attack.

The SpiderAlert Staff Attack Transmitter may be worn as a neck pendent or attached to a key ring. Made of tough ABS thermoplastic, its field-proven design is both waterproof, shock resistant and contains no moving parts.

Powered by a single alkaline battery; the SpiderAlert Staff Attack Transmitter is Energy Efficient, providing up to three years of service before needing replacement.

Battery, Neck Pendent and Key Ring Attachment included.

Staff Attack Transmitter
(RF Version with Neck Pendent)

Staff Attack Transmitter
(Dual RF/IR Version on Key Ring)

Product Features

- Emergency call signaling
- Tough, field-proven design
- Water proof and shock proof
- Dual RF/IR signaling technologies
- Low battery LED indicator
- Battery life - approximately three years
- CE, FCC, IC approved

Applications & Uses

- Staff Attack/Duress alarms
- Employee reassurance
- Staff member identification
- Prisons/correctional facilities
- Acute care hospitals
- Secure psychiatric units
- Custodial care homes
