

Resettable Call Pendant

Description

The SpiderAlert Resettable Dual-Tech Call Pendant (MCT/IR-252WPS) is a miniature, long-range wireless transmitter. The pendant is engineered for indoor, mobile emergency alarm signaling in industrial, correctional and healthcare environments where there is a high security-level requirement for immediate emergency personal response.

The pendant's RF/IR dual technology transmitter emits low power, UHF (315 or 868MHz) beacon type radio frequency messages plus safe, supplemental infra-red (800nm) messages that can be used to determine the real-time location of the pendant to sub-room level precision.

The MCT/IR-252WPS features two color-coded, call buttons for the manual triggering of up-to-three different user definable emergency alert messages plus first responder manual reset functionality. The pendant supports repetition as well as no-response alert escalation message modes for customizing the transmission output of the pendant to the monitoring protocols of the local facility. The device also transmits around-the-clock user definable operational status and supervision messages to ensure complete 24/7 reliability.

Small in size and weight, the MCT/IR-252WPS is enclosed in a shower/bath proof, tough ABS field-proven hospital housing. Powered by a single lithium battery, the pendant is energy efficient, providing up to three years of continuous service before needing replacement.

SpiderAlert
Resettable Call Pendant

Product Features

- Multi-button emergency call/duress signaling
- Tough, field-proven hospital design
- Bath/Shower proof
- Dual RF/IR signaling technologies
- Transmission LED indicator
- Compact lithium long-life replaceable battery
- CE, FCC, IC approved

Applications & Uses

- Nurse Call
- Personnel safety duress alarms
- Assisted living facilities
- Prisons
- Hospitals
- Psychiatric wards
- High-Risk industrial sites
